Relationships:
- userinfo to title -> many to one
  ◦ person can watch a title multiple times so multiple entries associated with one title
- title to genre -> many to many
  ◦ a title can have multiple genres, a genre can be associated with many genres
- title to director -> many to one
  ◦ each title can only have one director, but a director can be associated with many titles
- title to language -> many to many
  ◦ a title can be associated with many languages, a language can be associated with many titles

Assumptions:
- assuming that each title can be associated with multiple genres, multiple languages, and only one director
- assuming that multiple entries in user inputted information can be associated with one title (example: a user watched a show multiple times so there are multiple entries)
- UserInfo is the information inputted by the user and is related to Title through "watch history"
